PROFESSIONAL SUMMARY

Data Analyst with 3 years at Accenture delivering analytics, automation, and process improvement for a Fortune 500 insurance client; diagnosed SLA bottlenecks across a ~600-person support account and designed an operating-model change followed by a ~10 percentage-point drop in SLA breaches. Currently a Financial Data Analyst Intern at Global Insight Advisors, evaluating alternative datasets for investment research, and an AI Trainer evaluating LLM outputs. MS in Business Analytics from UMass Amherst (GPA 3.9) with hands-on SQL, Python, Tableau, and Power BI.

EDUCATION

University of Massachusetts, Amherst (Isenberg School of Management) *September 2024 - May 2026*
Master of Science in Business Analytics *GPA: 3.9/4.0*
Manipal University Jaipur, Rajasthan, India *July 2017 - July 2021*
Bachelor of Technology in Electronics and Communication Engineering *GPA: 7.8/10.0*

EXPERIENCE

Financial Data Analyst Intern, **Global Insight Advisors, San Francisco, CA (Remote)** *November 2026 - Present*
- Source, evaluate, and refine nonstandard (alternative) datasets for use in equity and fixed-income investment strategies, within the research team of a capital-markets advisory firm.
- Run statistical analyses to test whether candidate datasets carry usable signal, and report findings directly to the Managing Principal.

AI Trainer (Contract), **LinkedIn AI Trainer Program via GreenLight Workforce Solutions (Remote)** *October 2026 - Present*
- Evaluate and rate LLM outputs against detailed rubrics for accuracy, reasoning, and guideline adherence; write prompts and reference answers used to train and benchmark models.
- Annotate and classify data to labeling guidelines and review other trainers' submissions for quality and consistency.

Business Architecture Analyst (Data & Analytics), **Accenture, India** *June 2021 - July 2024*
- Diagnosed SLA performance using 90 days of ticket history across a ~600-person support account; found 55% of aged tickets had been reassigned more than once and another 25% sat with a single owner without escalation.
- Redesigned the operating model by cutting intake categories from 11 to 7 and introducing a headcount-neutral rotation across micro teams; after leadership approved both, SLA breaches fell from 30–35% to 20–25% and reassignments in the two worst categories dropped by ~1/3.
- Reduced quarterly processing time by 40% across three business units by designing a 12-table AWS RDS (MySQL) database and defining Power Apps requirements to centralize form management; recognized with the Trailblazer Award.
- Replaced manual Excel reporting for 25+ users across five departments with self-service Power BI and Tableau dashboards fed by automated AWS RDS data.
- Built repeatable Python pipelines to combine and validate 50K+ insurance claims records quarterly, identifying gaps in 15% of records.
- Gathered reporting requirements from business and compliance stakeholders, translated business rules into technical specifications, and documented 3,000+ production forms as the reference inventory for governance (Pinnacle Award).

PROJECTS

P&C Insurance Claims Analytics (SQL) *May 2026 - June 2026*
- Designed a 7-table relational database modeling P&C insurance operations and wrote SQL (joins, CTEs, window functions) to analyze loss ratios, claim severity, settlement time, and regional claim frequency.
- Built rule-based fraud scoring and customer risk segmentation with CASE expressions and conditional aggregation to prioritize high-risk claims for Special Investigations Unit review.

Airbnb Review Sentiment & Pricing Analytics *April 2026 - May 2026*
- Processed 320K Airbnb reviews into a 58.5K-listing dataset using TF-IDF, n-grams, and DistilBERT sentiment scoring; compared LDA, NMF, and LSA topic models to extract guest-experience themes.
- Engineered 85+ features and benchmarked Ridge Regression against a Keras neural network for price prediction, improving R^2 from 0.51 to 0.62, then used permutation importance to surface the strongest price drivers.

3toGo – Co-developer, iOS Language-Learning App (3toGo.app) *February 2026 - Present*
- Co-developed and shipped a subscription iOS app with AI-assisted coding that gates distracting apps behind 3 Spanish questions via Apple's Screen Time API.
- Built a 7-stage acquisition funnel for ~16.5K reached users from Meta Ads and App Store Connect data, removing invalid traffic and identifying paywall-to-trial conversion (~6%) as the main drop-off.

TECHNICAL SKILLS

Languages & Databases: SQL (MySQL, PostgreSQL, SQL Server), Python (Pandas, NumPy, Scikit-learn).
Cloud & Data Engineering: Amazon Redshift, Amazon S3, AWS RDS, ETL, Relational Data Modeling, Data Validation, Git/GitHub.
BI & Visualization: Tableau, Power BI (DAX, Power Query), Excel (Advanced), Power Apps.
Analytics & Machine Learning: Statistical Analysis, Predictive Modeling, Regression, NLP, Transformers (DistilBERT), Neural Networks, Topic Modeling, Model Evaluation.
AI Tools & Techniques: LLMs, LLM Output Evaluation, Prompt Engineering, Data Annotation, AI-Assisted Development.
